DEPOSITION

no idea where it comes from

PROCEDURE

IN MIND

In 2048, Saipan is no more an island, but a port bordered by a lake in the heart of the Middle Pacific of Sandy Ocean.

Appeared usual and ordinary, the life of expended continents is, nevertheless, not the same with sand-belts of Middle Pacific Highland and industrial exportation. The dwellers that were mainly aborigine in 2008 are presently composed of the migrants from the coasts of collapsed continents, who never settle down and always sail within the same dunes of the Pacific.

Saipan that was a worldwide mockery 30 years ago is now a master and governor of the newly born empire and its reputation became out of reach. The upheavals that bore the banks are of maieutic on a world currently in rejuvenation. What is achieved in Saipan makes the old and withered world envious of a 'beauty of elsewhere'. The wealthy countries have cast long an inquisitive glance at the Pacific and each developed a relaxation resort providing balance sheet.

However, these same defenders of beauty as such will later discover somewhat different advantage of the wild region. It will rejoin the Kyoto Protocol (1997). Neither a place to hide nor any financing to treat having found, the billion tons of food wastes will be buried underground and this holiday resort at the edge of social misery will simply accept the helps from wealthy countries referring to a substantial development.

The 'sustainable chic' of these embezzlers may grow beyond reason till the chemical implosion. The billion tons of wastes on the coasts will infiltrate into the land and destructure the terrestrial elements. In result, the slow erosion will begin filling the Pacific with the aggregates from continental coasts. Gradually the filled ocean will form a multitude of dunelands.

The promoters of resorts and ecology who poured their bins on the earthly paradise will organise scrupulously 'a new commerce' on the land, "Restore", that is pump the sands of the land and sell it to the damaged countries to reconstitute their coasts.

Looked at reversely, this is precisely what formulates Saipan of a new allure, new commerce, and new statue of today in 2048 in the Middle Pacific Highland of dunelands, a city as an idol of sustainable action, which turned out to be a scape-goat of sustainable spirit.

This is an attempt to understand how such an issue like 'sustainability' and its wrong doings can cause baleful effects that will echo in the future for centuries.

WHAT - 1

2048

FOOD STALL at SYB..

At the multimode zone of Saipanlake at the Line SYB connecting between Sydney - Yokohama - Bogota, there are food stalls of great singularity. The phenomenal number of travellers flowed in every day are instantly met here. 23 Nationalities hustle and bustle. Each person's energy stimulates increasingly flourishing trades in this region. Recently, this zone was recommended in the guide-books for its good restaurants and most unusual night festivals.

2047

SAIPAN LAKE

Walking along the seashore always has great charms. In Saipan that was once an island in the middle of the ocean and that is now a molecular city bordered by a lake, one can walk around the lake instead.

Sapinlake became a unique natural element that should not be exploited in the region. Suitable for the residents who came to direct the operation in the area, offering a high standing image, this lake is an adorable anachronism and ethnocentric privilege.

- 39

YEARS FROM

0

SUSTAINABILITY

WHAT -1

2046

HARVEST

The major source for small-scaled exploitation of Pacific converging on Saipan is the sand handling. Nevertheless, this hushed economy nourishes more than 62 millions individuals unable to expect the prosperity with the dividends, with little gratifying work of a kind.

- 38

YEARS FROM

+ 4

SUSTAINABILITY

WHAT - 1

2045

ORDINARY HAPPINESS

The days seem peaceful. The Middle Pacific Highland is not the place where one is treated badly. The life is fluid like dreams. Like the ones drifting in swampy water, the village migrates according to the climate and the profitable exploitations.

- 37

YEARS FROM

+5

SUSTAINABILITY....

WHAT - 1

2044

EXTRACTION

However, the days of these works are harsh. Like Dubai that conceals underground the wealth allowing their ostentation, the undergrounds of the Pacific possess thousands of extractions points connected by a long corridor. Working in the Pacific is to spend the life out of daylight and to live hidden like this raw material that enriches the outer countries that exploit without being noticed.

WHAT - 1

2042

TRANSIT HARBOUR

The scenery of containers, of modern port is beautiful. Each beauty has its time. For Saipan, it is contemporary. The beauty of Saipan and other hubs of the Pacific regions is that of immense trades. Saipan is not any more a place created to develop a quality of life, but a place of transit where even a thought is always headed towards the destination, where 'Here and Now' changes to 'There and Later'.

2041

EXODUS

For the new El Dorado, for the remission of lamentations, thousands of migrants, the people who were forced to leave the peaceful places of continental coasts 30 years ago already pour in.

This is probably the most dramatic characteristic of this episode. The commercial devaluation of the dreams of whole generations.

SUSTAINABILITY

2034

RE : FLOW

The major currents that evolved in the Pacific were completely modified abruptly or with years. From an ocean, the space took the form after small spaces closed on themselves, between the dune and the lake, inland sea. The terrestrial footbridge which linked Russia and America was broken down and replaced by a cord of dune between the old south-east Asia and South America. On its passage, there is Saipan at the beginning of transformation that is the only community capable of perceiving and reacting industrially to the new worldly stake of which it was a prey.
